

NETWORK OPERATING SYSTEM

Task 5

Using group policy.

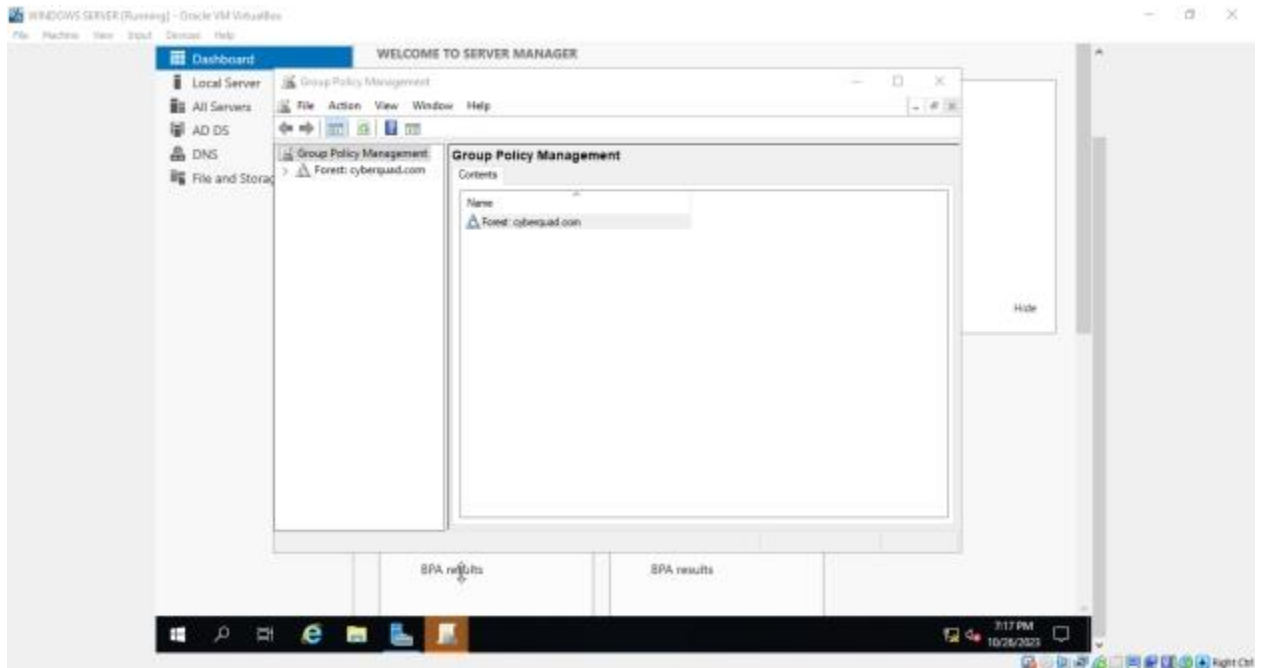

By

DEWTON KIPROP

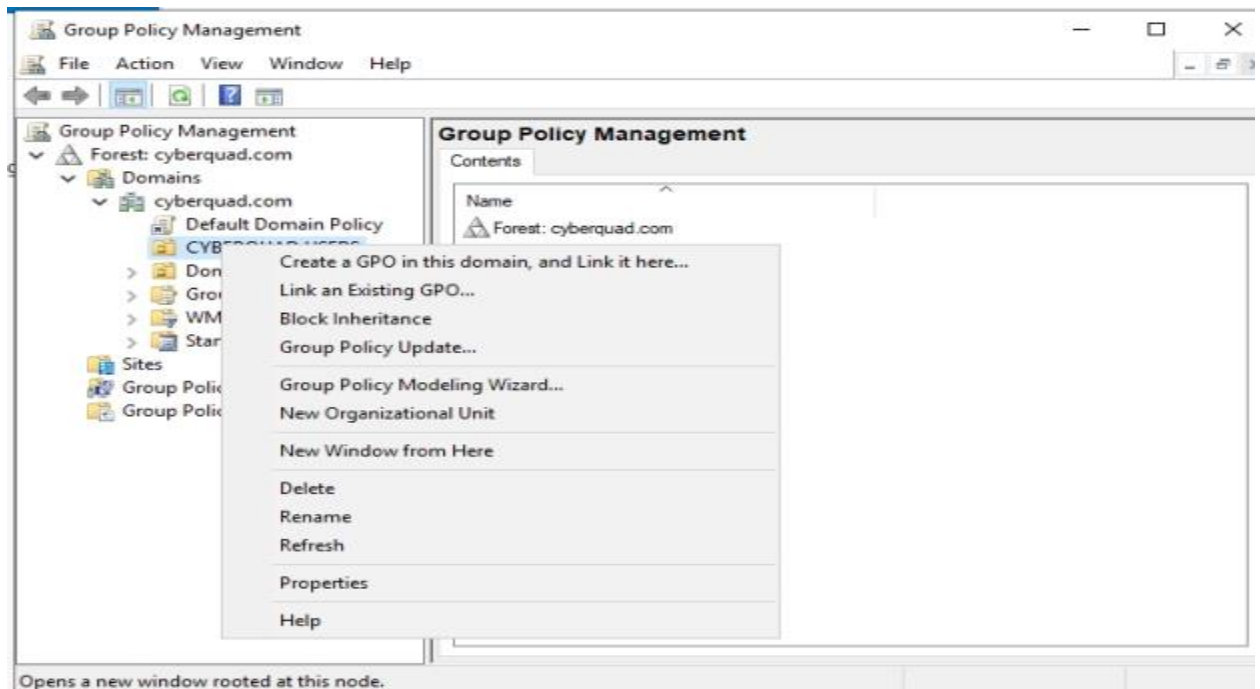

Launched the Group Policy Management Console (GPMC) on the Windows Server.

This operation started the GPMC, which gave access to the Group Policy administration interface. The GPMC is a sophisticated tool for creating, managing, and enforcing Group Policies in the Windows Server environment. We obtained the power to supervise and regulate Group Policy settings by accessing the GPMC, assisting in the effective operation of our Windows Server system.

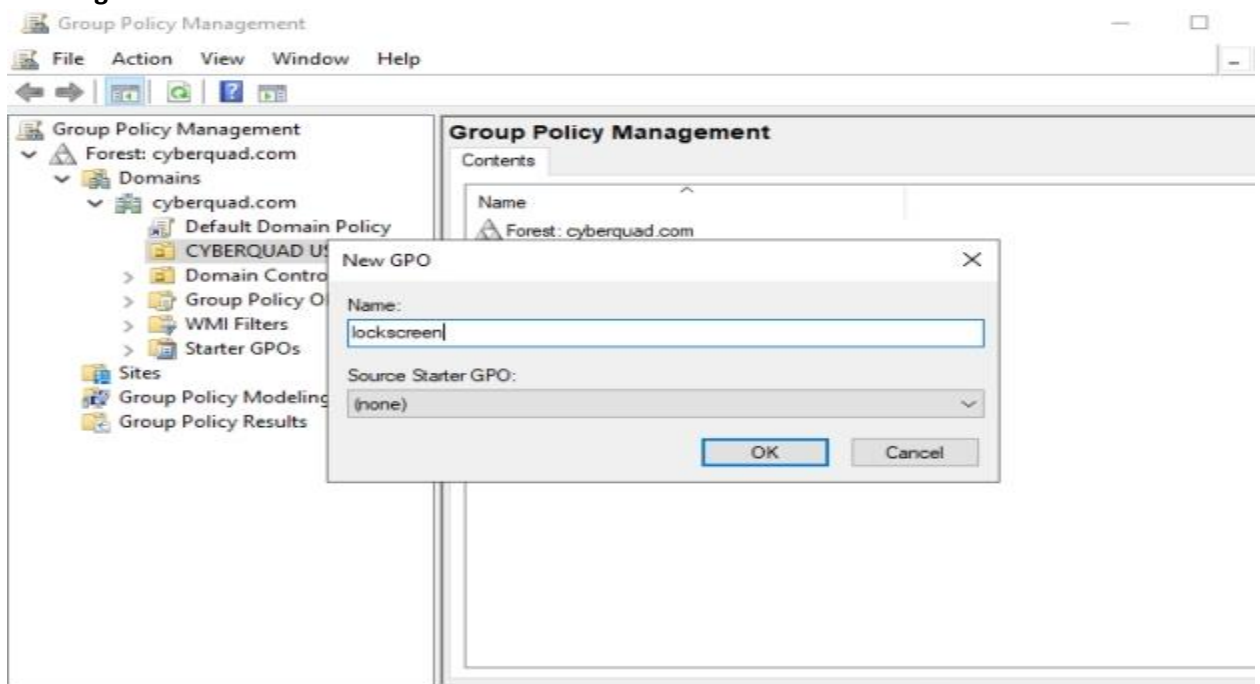

Creating a New GPO

To create a new GPO, right-click on the domain or OU where we created it and click Create a GPO in this domain

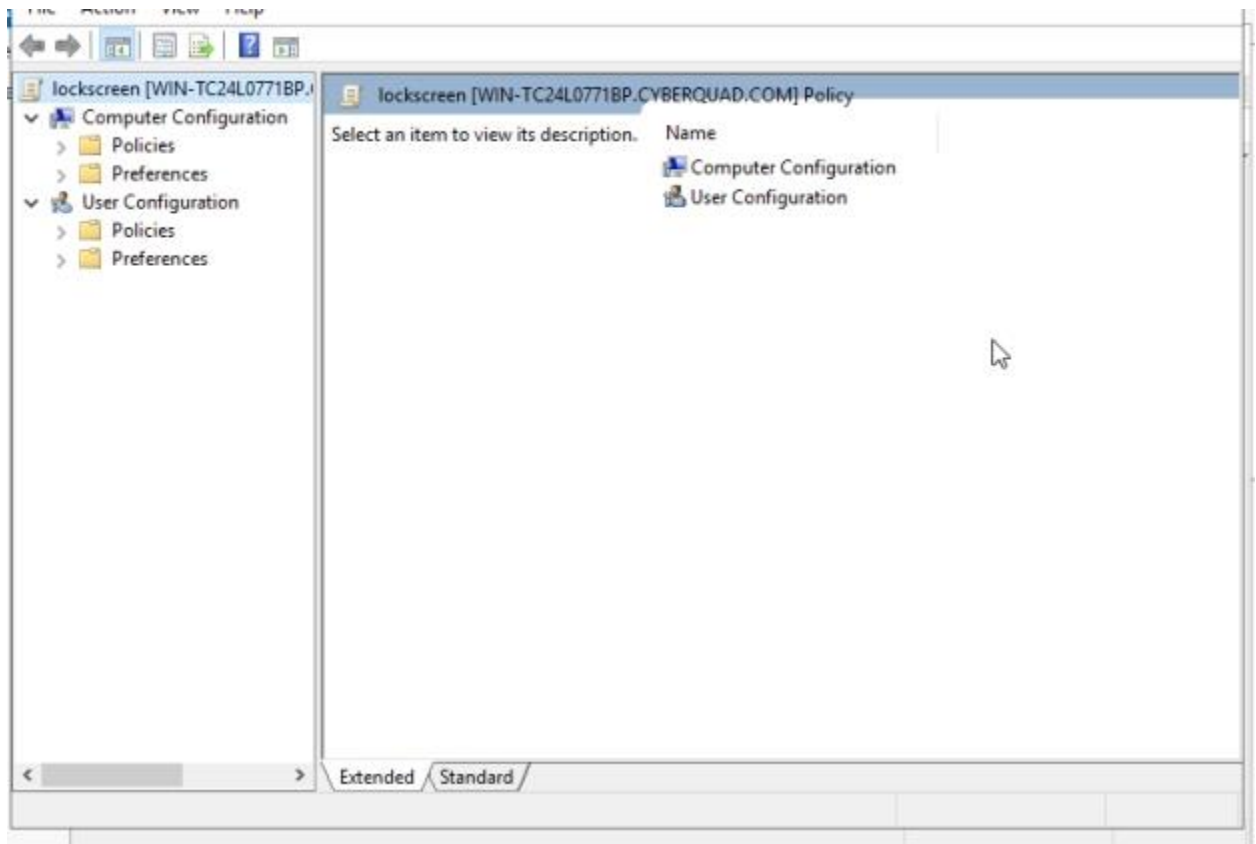

Naming the GPO

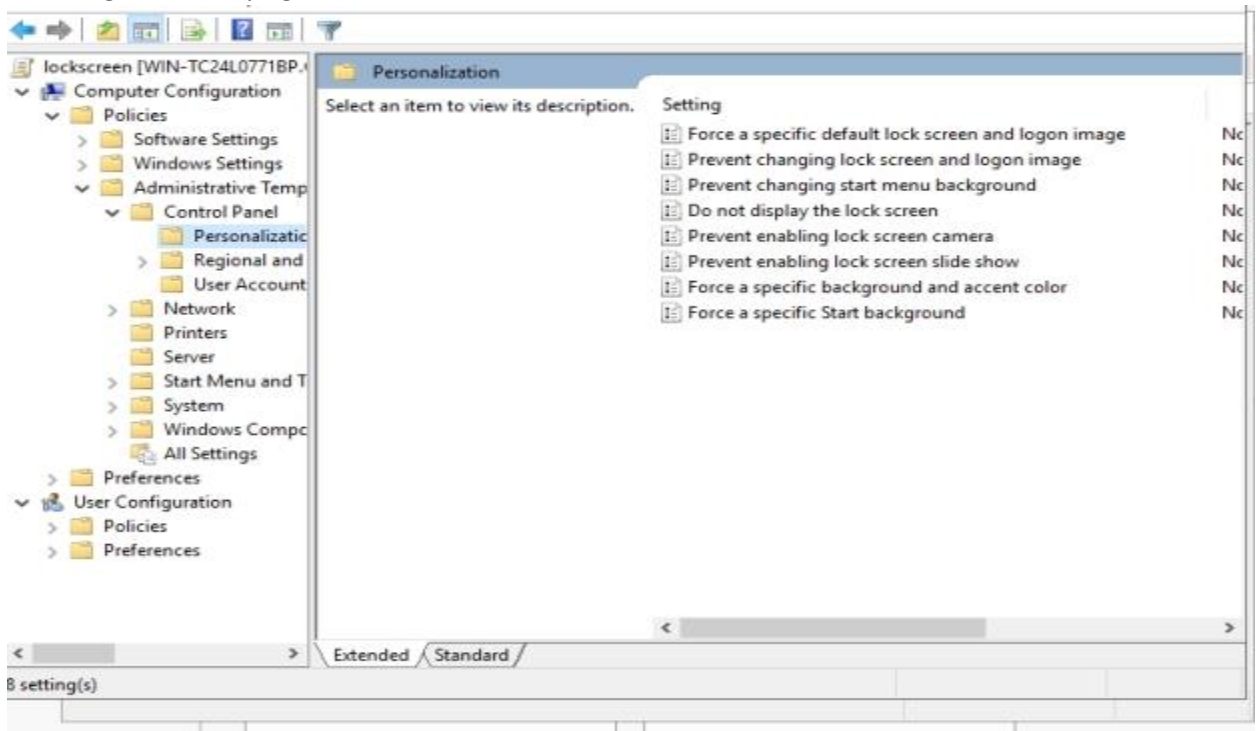

Access the Lock Screen Policy settings in the Group Policy Object Editor by going to Computer Configuration > Administrative Templates > Control Panel > Personalization. Look for 'Force a certain default lock screen and logon picture' or any similar lock screen policy options.

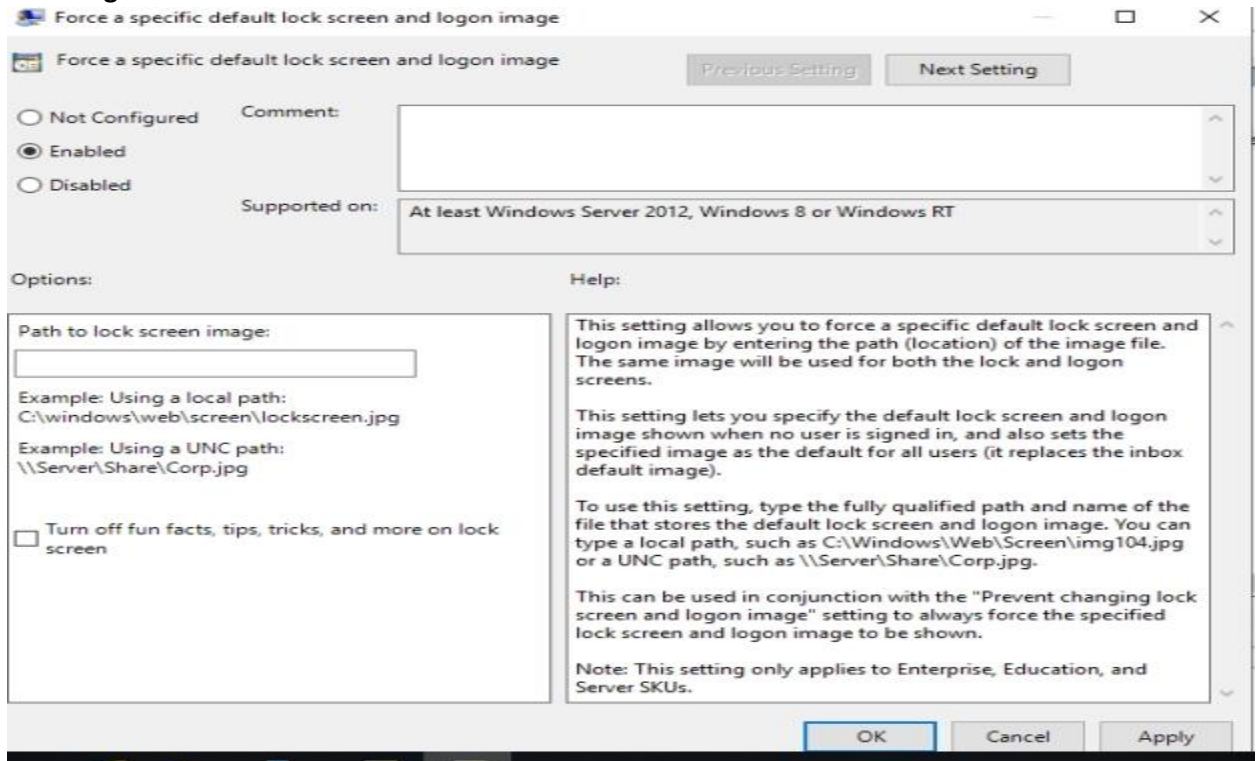

C

Choosing and modifying the GPO.

Enabling GPO

Applying GPO
